

THE COUNCIL FOR TOBACCO RESEARCH-U.S.A., INC.

5
January 26, 1973

Grant Application No. 897

To: The committee comprising Drs. Jacobson, Loosli, and
Sommers

Subject: Robert C. Rosan, M.D., Cardinal Glennon Memorial Hospital
for Children, St. Louis, Missouri
New application No. 897
"Molecular Parameters of Lobular Regeneration and Function"

This memorandum supersedes that dated December 18, 1972
on Grant Application No. 647AR2 of this applicant.

Dr. Rosan has elected to waive his priority in com-
petition as renewal, and to submit the enclosed revised applica-
tion for a new grant.

May we suggest that you destroy the application sent
to you with our memorandum of December 18.

TABLE OF CONTENTS

1. Name of Investigator, Title and Degrees
2. Institution & Address
3. Short Title of Project
4. Proposed Starting Date
5. Anticipated Duration of this Specific Study
6. Brief Description of Objectives or Specific Aims
7. Brief Statement of Working Hypothesis
8. Details of Experimental Design and Procedures
 - A. Introduction
 - B. Unit lobule hypothesis
 - C. Experimental design
 - (1) Summary
 - (2) Details
 - a. animals
 - b. exposure to pulmonary irritant
 - c. methods and materials
 1. Clinical evaluation
 - (a) appearance
 - (b) activity
 - (c) weight
 - (d) rectal temperature
 - (e) homogram
 2. Serum chemistry
 - (a) alkaline phosphatase
 - (b) g-glutamyl transpeptidase
 - (c) aspartic transcarbamylase
 - (d) blood gases
 3. Pulmonary function studies
 - (a) pulse electrocardiograph
 - (b) respirations frequency
 - (c) tidal exchange
 - (d) pulmonary mixing (nitrogen washout)
 - (e) minute ventilation
 4. Chest roentgenography
 - (a) technic
 - (b) tantalum powder bronchography/clearance
 5. Autopsy procedures
 - (a) general necropsy
 - (b) heart
 - (c) lungs
 1. electron microscopy
 2. alkaline phosphatase histochemistry
 3. neurosecretory granules
 4. ordinal grades of histological lesions
 5. Goblet cell counts
 6. Tantalum particle macrophage counts
 7. ordinary histological diagnosis

1003538626

(d) lung homogenates

1. general method of fraction preparation

a. modifications established in laboratory

b. projected zonal ultracentrifugation

1. enzymatic activity

2. total protein

3. neurosecretory granules

(a) wet chemical bioamines

(b) thin layer chromatography of bioamines

(c) fluorescence of granules

4. ribosome analyses

(3) Significance of work

a. defects in current designs

b. systems analysis

c. operational analysis

d. immediate significance

e. long range significance

f. summary

(4) Projected schedule of laboratory work

(5) Interpretation of results

a. molecular

1. ribosomes and protein synthesis

(a) g-glutamyl transpeptidase

(b) aspartyl transcarbamylase

(c) alkaline phosphatase

(d) ribosomal protein

2. neurosecretory granules

b. morphological

1. fluorescence microscopy

2. electron microscopy

3. light microscopy

(a) Tantalum in macrophages

(b) Coblet cell counts

(c) semiquantitative lesions

c. physiological lung tests

1. nitrogen washout

2. minute ventilation

d. chest roentgenographs

e. complete autopsy procedures

1003538627

6. Previous work

- a. molecular
- b. morphological
- c. clinical
- d. theoretical

7. Reference list

9. Physical facilities

10. Additional requirements

11. Biographical sketch
